Allowable Subject Matter

1. Claims 1-10 and 13-50 are allowed over prior art.
2. The following is a statement of reasons for allowance: As indicated in the previous office action, claims 1-4, 6-10, 13-42 and 48-50 contain allowable subject matter. Applicant has amended claims 43 and 45, which takes care of the 112 previous 112 rejections. In addition, after reading Applicants argument regarding the 112 rejection of claim 5, Examiner withdraws the 112 rejections with respect to claim 5. Although the prior art teaches flow control associated with a packet data communication system wherein the architecture includes CAM lookup to determine action indicated by rule-based routing/switching schemes, CAM produces an index pointers which are used for pointing to actions associated with packet processing, plurality pipelines, lookup pipeline controls the CAM and handles flow control and the interfacing between flow label queue and the CAM, forwarding engine/forwarding engine interface, CAM interface pipelines contain multiple stages, logic unit coupled to both interfaces and register, tagging rules associated with lookup, packet flow consisting of various sizes, pipeline registers, input interface/output interface they fail to teach/suggest fetching input flow information that identifies where input capacity information for a packet is located and comparing within another of said stages an input capacity for a packet with packet size and indicating whether said packet is conforming/non-conforming based upon said comparison, a second pipeline stage that operates to retrieve one or more parameters that describe said first input rate so that it can be determined if said sending of said first packet conforms to said first input rate, and a first interface/second interface that receives information indicative of packet size/receives flow information and an input flow information comprising a pointer to information describing an input bucket for a packet.
